Government Technology Solutions

Information Assurance Tools for the Public Sector

Since 1997 Government Technology Solutions (gvTechSolutions) has partnered with public sector agencies at every level of government to meet today's critical Information Technology Infrastructure and Data security technology requirements.

In the specialized and complex public sector market knowing everything about a specific technology is simply not enough. Our extensive experience with, and exclusive focus on, the Information Assurance needs of government agencies sets us apart.

We have participated in the development of some of the most important industry and government standards including NIAP as an industry partner.

Our knowledge of the applicable technology and procurement standards and processes allows us to ensure the efficient evaluation and procurement of best-of-breed Information Security technologies by government agencies of any size.

- ❖ Firewall
- ❖ Enterprise Security Management
- ❖ User Provisioning
- ❖ Anti-Virus
- ❖ Controlled Access Management
- ❖ Directory Management

- ❖ Identity Management
- ❖ Mobile Code Security
- ❖ IPS/IDS
- ❖ Configuration Compliance
- ❖ Spyware Countermeasures
- ❖ VPN & SSL VPN
- ❖ Encrypted Content Security
- ❖ Anti-Phishing
- ❖ Data Loss Prevention
- ❖ Network Access Management
- ❖ UTM Devices

Recognized Standards

gvTechSolutions is the industry leader in requiring IA technologies we represent to be NIAP and FIPS Certified, or currently in the NIAP Certification process. The National Information Assurance Partnership (NIAP) is a U.S. Government initiative originated to meet the security testing needs of both information technology user and producers. NIAP is a collaboration between the National Institute of Standards and Technology (NIST) and NSA.

Public Sector Specialists

We represent our technology partners exclusively to the public sector. Consider this brief list of IA technology purchasing agreements awarded to **Government Technology Solutions**

Best of Breed IA Technologies from World Class Partners

The Automated Risk Reporter is a new tool in the ACR RISK Reporting series from ACR 2 Solutions, Inc. This program is a new product bundle that is designed to uniquely meet the requirements of the FDCC and SCAP. This automated process meets the requirements of NIST 800-39 for real-time security status information and reporting

IALAB.org is an online, easily accessible test and evaluation network for organizations that do not have test and evaluation resources locally. gvTechSolutions pre-loads the applications required, manages the servers and environment, and allows customers to test products and configurations for less than the cost of buying one server locally.

WatchGuard builds affordable, all-in-one network and content security solutions to provide defense in depth for corporate content, networks and the businesses they power. WatchGuard's award-winning extensible threat management (XTM) network security solutions combine firewall, VPN and security services to protect networks from spam, viruses, malware and intrusions.

Accellion, Inc. provides enterprise-class managed file transfer solutions for security and data leak prevention that meet today's business requirements for digital information transfer. Designed with unparalleled flexibility and scalability, Accellion provides organizations from less than 100 to more than 100,000 users with flexible deployment options.

Fidelis Security Systems provides **XPS DataSafe**, the first **Extrusion Prevention System**. **DataSafe** prevents the unauthorized network transfer of critical or sensitive information across multiple channels at gigabit speed.

Imanami software solutions significantly reduce costs and increase productivity and security for organizations around the world. Simple and affordable solutions for Directory Management, User Provisioning and Identity Management.

Microdasys takes your security to the next level with **Deep Content Security** solutions, enabling the inspection, control and management of **SSL** and **XML** traffic.

The Mobile Armor Data Encryption & Device Management Suite is designed for the way government works today – it is secure, simple, flexible and cost effective. It uses fast AES 256 FIPs certified data encryption that is built on the Mobile Armor Common Development and Management Platform that has a unified data repository with a central management policy server and console.

Symantec Brightmail is a high performance software or appliance solution that blocks spam at the Internet gateway. Combining several patented techniques, **Brightmail** offers the best accuracy rate available in spam filtering technology.

And we represent the full line of **Symantec** technologies

Trend Micro is a global leader in network Anti Virus, Anti-Spam, Virtual and Internet content security software and services, focused on providing customers with comprehensive security strategies to manage the impacts of known and unknown threats.

BigFix from IBM provides high performance security and systems management enabling customers to securely manage their global IT infrastructures faster, more accurately, resulting in improved governance, control, visibility, and business agility.
